

Living Water: The filtration systems for optimal health

PiMag Water System benefits:

- o Multi-filtration system
- o Water easily absorbed by cells of the body
- o Vibrationally energised and de-clustered = bio availability
- o Less acidic than all other water
- o More practical than bottled water
- o Consistently produces quality water
- o Easy to maintain

PI = Water of Life, (Living Water), The PiMag Water System is a Multiple-stage filtration system, first identified in Japan over 30 years ago.

Water is vital to almost every bodily function. Water is essential for proper digestion & nutrient absorption. Water is essential for proper circulation. Water helps flush toxins from our system. Water regulates the body's cooling system.

Stage 1: CERAMIC PREFILTER – removes foreign material (including rust) and particles down to a range of 0.2 to 0.5 microns.

Stage 2: THREE STAGE FILTER CARTRIDGE - Water flows through an activated carbon medium, ion exchange resin & zeolite to reduce/eliminate

- toxic chemicals: including chlorine, trihalomethanes, PCB, TCE, detergents, pesticides (DDT), MtBE
- harmful microscopic pathogens: Cryptosporidium, Giardia
- heavy metals: Aluminium, Asbestos, Cadmium, Chromium, Copper, Lead, Mercury
- Radon-222

Stage 3: PI FILTER - Contains three types of ceramics and special coral sand to reproduce conditions for creating pi water. (living water)

Stage 4: MINERAL & SILVER STONES – natural alkaline substances that reduce the growth of bacteria, help maintain a balanced range of beneficial minerals (including calcium, magnesium and potassium) and adjust the pH balance to mildly alkaline.

Stage 5: Magnetic Energy – water is delivered through a 1,200 gauss magnetic tube to:

- Break down water molecule clusters to ease cell hydration
- Imparts 'vibrational energy' into water molecules

Fluoride is not removed by the PiMag Water System.

Upper tank holds 5 litres and the bottom tank holds 15 litres

PiMag Optimiser II for extra oxygenation and bio-availability of water into your cells

Natural processes, to simulate the water found in nature. Strives to duplicate this water. The PiMag Optimizer II uses a pair of 4,400 gauss magnets

- Adjusts pH - to rapidly spin pre-filtered water through a ceramic ring containing coral calcium which is a highly alkaline mineral that can help reverse the body's pH and move it to a more alkaline state
- adds negative ions
- Imparts FIR Energy & reduces size of water molecules
- Oxygenates the water - Vortex agitation in a 4,400 gauss magnetic field adds oxygen to water without using chemicals.

PIMAG OPTIMISER BENEFITS

- o Highly oxygenated and energised water
- o Highly alkalised water
- o Breaks down water molecule clusters from approx 20 to 6
- o Small 6 chain water cluster molecules pass through the brain more readily
